ABSTRACT

9 223 372 036 854 775 808 \$athom were minted by @0xD9E0 aka #E0 on March 29, 2021 during an experiment to find what is the maximum amount a Native Tokens can be minted.

9 223 372 036 854 775 808 is Nine Quintillion or nine quintillion two hundred twenty-three quadrillion three hundred seventy-two trillion thirty-six billion eight hundred fifty-four million seven hundred seventy-five thousand eight hundred eight.

The reason for such limitation is the use of a signed word64 variable to carry the amount of Tokens in UTX0. Which is 2^{63} .

WHY CARDANO?

Cardano is a revolutionary blockchain technology that provides a layered approach to developing smart contracts and decentralized applications (Dapps). Unlike other disruptive technologies, Cardano's potential for transforming various problem domains goes beyond just finance and can even extend to social structures.

Cardano Native tokens offer the same level of functionality and security as the Cardano network and its native cryptocurrency, ADA. Unlike tokens on other networks such as ERC-20 and BEP-20, Cardano Native tokens are not vulnerable to hacks, and users and transaction fees are smaller.

Cardano employs a Proof of Stake (POS) consensus. Unlike other blockchains, there are no miners or endless fields of computers consuming massive amounts of electricity. Instead, the network only charges small transaction and transfer fees that accompany each Native Token transaction to further support the system.

WHY \$athom TOKEN?

Tokens were called \$athom in appreciation of Democritus atomic theory of the universe and spelling was taken from Hindi.

WHY \$athom FUNDAMENTAL?

There is nothing more than \$athom within the Cardano blockchain.

WHY \$athom Spinning?

It was the first token with the animated image in Cardano Token Registry because of know-how-to-hack. Cardano Token Registry does not allow animated GIFs, but you see it's spinning
